

ABSTRACT OF THE DISCLOSURE

A farm animal feed management system that can be used to order feed and adjust rations automatically. A local database transmits animal, production, and ration data for analysis by a service provider such as a nutritionist, veterinarian or feed supplier. The service provider can
5 compare this data to other farms, and use such information to adjust rations, order feed or suggest examination by a veterinarian. Alternatively, the local database transmits the data to a first remote database that transmits the data to a service provider. Comparisons between farms and other data analysis can be done at the first remote database.
